### **Mass Appraisal Market Analyst Assessment/Valuation Services, Econometrics & Data**

Assessment prepares property and business market value assessments for municipal and education tax collection. Our assessors review, evaluate, and assess properties and businesses to maintain a competitive real estate market.

The Assessment Business Unit is responsible for administering high quality market value property and business assessments as a basis for municipal and education taxes. As a member of the Valuation Division, Mass Appraisal Team, this position provides statistical modeling support and will be responsible for:

- estimate, calculate and test base market values for valuation staff to validate;
- provide ratio studies to the valuation area for their review and approval;
- support the valuation area by explaining valuation model results and analyzing various modeling options. Through statistical analysis, recognizing potential problems with property data and recommending possible modeling solutions;
- provide appropriate statistical documentation to support valuation models and modeling recommendations;
- explore new modeling procedures and test results while maintaining existing modeling processes;
- organize and prioritize work activities in conjunction with requirements from other divisions;
- provide statistical support to other divisions as required.

Applicants must possess a recognized undergraduate degree in Economics, Statistics, Business or a related discipline that provides quantitative analysis training. A minimum of two

years related experience in econometrics or statistical modeling, mathematics, and forecasting methodology is required. Intermediate proficiency working with Microsoft Office (Word, Excel, PowerPoint and Outlook) and statistical packages (preferably SPSS) is essential. Experience or training in market valuation of real estate property would be considered an asset. Candidates must demonstrate knowledge of quantitative analysis, including the ability to apply statistical and mathematical theory to specify and calibrate models using multiple regression analysis, run statistical tests and interpret the results. Additional competencies for this position include strong interpersonal and problem solving skills, excellent planning and organization abilities, well developed oral and written communications skills, ability to work in a team environment and maintain effective working relationships at all levels.

Successful applicants must provide proof of qualifications. Only education obtained from an accredited institution will be recognized as meeting the minimum qualifications. **More than one position may be filled from this competition.**
